HP Firewall Manager

JD295A

HP Firewall Manager E-LTU

JD295AAE

Key features

- Centralized firewall management
- Comprehensive analysis of firewall devices
- Security history and trends monitoring
- Visual, detailed reporting
- SSL VPN, load balancing and Netstream management

Product overview

HP Intelligent Management Center Firewall Manager Software is a powerful system for comprehensive analysis and management of firewall devices. It supports centralized policy configuration management and real-time monitoring of firewall devices throughout the network, implements collection and comprehensive analysis of attack event information, enables log auditing, and provides visual, detailed reports. From these reports, the security status history as well as the security trends of the network can be easily seen. Firewall Manager also offers SSL VPN log auditing functions to analyze SSL VPN users and monitor devices and can manage load balancing and NetStream networking products, providing complete, powerful network security protection management.

Features and benefits

Management

- **Flexible and convenient policy management:** Centralize manage firewall policies, and distribute a policy to multiple devices. Simplifies policy maintenance and achieves policy consistency.
- **Visual realtime monitoring:** Firewall Manager monitors security events on the network in real time. It generates a complete event snapshot after collecting and displaying various types of events in a centralized manner. The event snapshot lists the status of security events occurred in the last one hour.
- **Comprehensive event analysis:** Firewall Manager can centrally measure and analyze security events on the network, providing various types of visual and detailed reports. In panoramic analysis reports, users can view the past security conditions and future security trends of the entire network.
- **Detailed event and content auditing:** Firewall Manager provides powerful auditing capacity, extracting security event information from history data for quick correlation. By querying data in depth, users can analyze specific security events, thus discovering attack sources and root causes. With such in-depth query capacity, Firewall Manager can solve many types of user problems.
- **Web-based device management:** By clicking the devices on the device list, users can directly access the Web management interface for corresponding devices. No username or password is required in this way and single-point login is achieved. Users can configure and maintain multiple devices at one time.

Warranty and support

- **Electronic and telephone support:** limited electronic and telephone support is available from HP; to reach our support centers, refer to www.hp.com/networking/contact-support; for details on the duration of support provided with your product purchase, refer to www.hp.com/networking/warrantysummary
- **Software releases:** to find software for your product, refer to www.hp.com/networking/support; for details on the software
